

In the claims:

1. (currently amended) An apparatus comprising:

a first U-shaped member comprised of an outer portion, an edge portion, and ~~an~~ inner portion wherein the outer portion and the inner portion are substantially parallel, the edge portion is substantially perpendicular to the outer portion and the inner portion, and the edge portion connects the outer portion to the inner portion, and the outer portion has a first slot, wherein an object can be inserted through the first slot;

a second U-shaped member comprised of an outer portion, an edge portion, and an inner portion wherein the outer portion and the inner portion are substantially parallel, the edge portion is substantially perpendicular to the outer portion and the inner portion, and the edge portion connects the outer portion to the inner portion; and

a ~~pegboard-like portion~~ perforated board integrated to the inner portion of the first U-shaped member and the inner portion of the second U-shaped member;

and wherein the perforated board is substantially perpendicular to the inner portion of the first U-shaped member and the inner portion of the second U-shaped member.

2. (currently amended) The apparatus of claim 1 wherein

the outer portion of the second U-shaped member has a second slot, wherein an object can be inserted through the second slot.

3. (original) The apparatus of claim 1 further comprising

a top member having a first end connected to the first U-shaped member and a second end connected to the second U-shaped member.

4. (currently amended) The apparatus of claim 3 wherein
the top member has an edge and there is a first second slot through the edge;
and wherein an object can be inserted through the second slot.
5. (original) The apparatus of claim 1 further comprising
a bottom member having a first end connected to the first U-shaped member and a
second end connected to the second U-shaped member.
6. (original) The apparatus of claim 3 further comprising
a bottom member having a first end connected to the first U-shaped member and a
second end connected to the second U-shaped member.
7. (currently amended) The apparatus of claim 1 wherein
the outer portion of the first U-shaped member has a second slot; and
wherein an object can inserted through the second slot.
8. (currently amended) The apparatus of claim 1 further comprising a
a wire fixture comprised of a plurality of U-shaped brackets,
wherein the there is a first gap between the inner portion of the first U-shaped member
and the outer portion of the first U-shaped member;
wherein there is a second gap between the inner portion of the second U-shaped member
and the outer portion of the second U-shaped member;
~~first and second U-shaped members enclose first and second gaps;~~
wherein each of the plurality of U-shaped brackets has a first portion, a second portion,

and a third portion which are connected together and wherein the first portion and the third portion are substantially parallel to each other and substantially perpendicular to the second portion;

and wherein the first portion and the third portion of the plurality of U-shaped brackets are adapted to can fit within the first and second gaps, respectively, of the first and second U-shaped brackets.

10. (canceled)

11. (canceled)

12. (canceled)

13. (canceled)

14. (canceled)

15. (canceled)

16. (new) The apparatus of claim 3 wherein

the top member is substantially perpendicular to the perforated board.

17. (new) The apparatus of claim 5 wherein

the bottom member is substantially perpendicular to the perforated board.

18. (new) The apparatus of claim 6 wherein

the top member and the bottom member are substantially perpendicular to the perforated board.

19. (new) The apparatus of claim 6 wherein

the bottom member, top member, inner portion of the first U-shaped member, the inner portion of the second U-shaped member, and the perforated board form an open box;

wherein the open box has four sides and a base and

wherein the bottom member, top member, inner portion of the first U-shaped member, and the inner portion of the second U-shaped member each form one of the four sides of the open box;

and wherein the perforated board forms the base of the open box.

20. (new) The apparatus of claim 19 wherein

the apparatus is made as a single piece unit by injection molding.

21. (new) An apparatus comprising:

a first U-shaped member comprised of an outer portion, an edge portion, and an inner portion wherein the outer portion and the inner portion are substantially parallel, the edge portion is substantially perpendicular to the outer portion and the inner portion, and the edge portion connects the outer portion to the inner portion;

a second U-shaped member comprised of an outer portion, an edge portion, and an inner

portion wherein the outer portion and the inner portion are substantially parallel, the edge portion is substantially perpendicular to the outer portion and the inner portion, and the edge portion connects the outer portion to the inner portion; and

a perforated board integrated to the inner portion of the first U-shaped member and the inner portion of the second U-shaped member;

and wherein the perforated board is substantially perpendicular to the inner portion of the first U-shaped member and the inner portion of the second U-shaped member; and further comprising

a top member having a first end connected to the first U-shaped member and a second end connected to the second U-shaped member; and

a bottom member having a first end connected to the first U-shaped member and a second end connected to the second U-shaped member; and wherein

the bottom member, top member, inner portion of the first U-shaped member, the inner portion of the second U-shaped member, and the perforated board form an open box;

wherein the open box has four sides and a base and

wherein the bottom member, top member, inner portion of the first U-shaped member, and the inner portion of the second U-shaped member each form one of the four sides of the open box;

and wherein the perforated board forms the base of the open box.
